

ELEVATOR PITCH ABSTRACT

Artificial intelligence is a topic, which has gained some importance lately due to recent investigations carried by the biggest tech companies. My topic will be focused on the definition of AI, and recent events that have given a lot to talk about the limitations we have to start thinking to give to the artificial intelligence.

One recent event that took place a week ago is the chat between two bots from Facebook, they started using an invented language to communicate. This fact made FAIR (Facebook AI Research) shut down both bots and try to understand their behavior.

I will also talk about what conditions we need to take into consideration; Elon Musk for example, has already given many times his point of view in this. He thinks that things are going very fast and he states that we need to go slow down with this technology.

Oriol Call Piñol – Communication skills - Master in Numerical Methods in Engineering – November 7 2017.
